Decorative Door Skins

Size: 7' x 3' (It can be cut down equally from all sides up to 6'x2' to fit into smaller doors). **Thickness:** 0.50 mm **Designs:** 9 **Colors:** White, creme, grey, wooden and elegant wooden finish - as per page no. 45

Application: To decorate or remodel flush doors, panel doors, walls, partitions etc.

Just follow these 4 easy steps to install / paste the Door Skins.

1. Prepare the surface: The surface should be hard, plain and clean. Remove any loose paint, moisture, dust etc.
2. Cut the door skin in required size: Cut the door skins in the required size, allow 0.5" of more edge on all the sides.
3. Apply adhesive: Apply a fine layer of rubber adhesive on the back side of the door skin and on the surface, and let it be dry.
4. Place & press: Put wood sticks on the surface at 1 or 2' distance in the width part of door skin. Now, put the door skin on the sticks, and match the corners and paste them on the door. Now, remove sticks one by one and press the door skin on the door surface. This will avoid any mismatch in the edges. Take care of bubbles and dust particles etc. while pasting.

- ▶ Waterproof and washable
- ▶ Easy, quick and low cost installation
- ▶ No painting or polishing required
- ▶ Colorable
